What Would You Like to Showcase at Maker Faire?

Project Name *

DINO EGG Catch Challenge

This will be used as the title of your exhibit and displayed on the Maker Faire website. The title should be descriptive of what you want to bring to Maker Faire.

Exhibit Application

Project Description *

DINO EGG Catch Challenge is a hands-on robotics game!

Visitors guide a custom dinosaur-shaped mobile robot (LeKiwi) through an arena filled with dinosaur egg capsules. The dinosaur's long articulated neck is built from an SO-ARM101 robotic arm, and its gripper is hidden inside the dinosaur's mouth so that it appears to gently pick up each egg with its jaws.

Participants can choose from three different ways to play:

1. Drive Mode — Use a directional controller to drive the dinosaur close to an egg, then let the robotic arm automatically detect and pick it up.
2. Autonomous Mode — Give the dinosaur the entire mission and watch it search for, approach, and collect an egg by itself.
3. Puppet Mode — Move a leader robotic arm by hand and directly control the matching follower arm inside the dinosaur's neck and head.

The exhibit combines human control, autonomous robotics, computer vision, wheel PID control, imitation learning, and leader-follower teleoperation in one playful experience. Visitors can compare how the same robot behaves when controlled by a person, assisted by AI, or operating autonomously.

Each captured dinosaur egg contains an original dinosaur NFC keychain designed by nine-year-old maker Kanata. Catch an egg, open the capsule, and take home your dinosaur character!

Complete Maker Information

The "Maker" is the person(s) who made your project and is to receive public recognition. You can be listed as an individual, a group, or a company.

Who would you like listed as the maker(s) of the project? *

Just Myself

A Team / Group / Company

Group Information

Group Name *

Kanata the Kid Creator & STEM Dad

Group Description *

Kanata the Kid Creator and his dad are a father-and-son maker team from Tokyo, Japan. Nine-year-old Kanata develops ideas, characters, and playful experiences, while his dad helps bring them to life through robotics, artificial intelligence, electronics, programming, and 3D printing. Together, they create interactive projects that inspire children to explore technology and experience the joy of making.

Exhibit Layout or Drawing

ChatGPT_Image_2026... png

Do you have a hands-on activity for attendees? *

Yes

No

Please describe your hands-on activity. *

Attendees can choose from three ways to interact with the DINO EGG Catch Challenge.

In Drive Mode, participants use a directional controller to steer the dinosaur-shaped LeKiwi robot around the play arena. Once they position the robot close to a dinosaur egg capsule, they press the catch button and the SO-ARM101 robotic neck automatically detects, approaches, and picks up the egg with the dinosaur's mouth.

In Puppet Mode, participants move a leader robotic arm by hand to directly control the matching follower arm inside the dinosaur's neck and head.

At scheduled times, visitors can also watch Autonomous Mode, where the robot searches for, approaches, and collects an egg by itself.

The activity is designed for children and families, with continuous staff supervision, low-speed operation, a clearly marked robot arena, and an emergency-stop control. Participants who successfully catch an egg may open the capsule and receive an original dinosaur NFC keychain designed by Kanata the Kid Creator.

Exhibit Application

Lighting

☒ Normal

☐ Dark

Noise

☒ Normal - does not interfere with normal conversation

☐ Amplified - adjustable level of amplification

☐ Repetitive or potentially annoying sound

☐ Loud!

Does your exhibit require power? *

☒ Yes

☐ No

Electrical: Power is expensive! We want to provide enough, but not too much. Please see the [Maker Toolkit](#) for help in determining your power needs.

Please bring your own extension cord (at least 25' in length) and multi-strip outlet for power distribution at your exhibit. On-site power requests cannot be guaranteed. Any excessive power request will require approval.

What are you powering? *

We will power one laptop or compact PC, two displays, the LeKiwi mobile robot, the SO-ARM101 robotic arm, and small low-voltage accessories such as cameras.

The robot and robotic arm will operate continuously from AC adapters rather than batteries. No high-current heaters or other heavy electrical equipment will be used.

Understanding your power usage is important. We need to ensure you have what you need and that you will not create a problem for your fellow Makers by tripping the circuit breaker.

Exhibit Application

How much power do you require (total amperage)? *

05 amps (0-500 watts, 120V) 

10 amps (501-1000 watts, 120V)

15 amps (1001-1500 watts, 120V)

20 amps (1501-2000 watts, 120V)

More than a 20amp circuit (120V)

A 220V outlet is required

Other. Power request specified in the Special Power Requirements box

Please add up the power usage of all items you wish to bring.

Does your exhibit use or disrupt radio frequencies?

Yes 

No

Describe additional details of your RF use. *

The exhibit will use standard 2.4/5 GHz Wi-Fi for communication between the control computer, the LeKiwi mobile robot, and the controller.

RF use will be limited to short-range, low-power consumer equipment. The robot can also operate on a local network without internet access. We will avoid creating our own high-power access point and will not intentionally interfere with other exhibitors' wireless systems.

Exhibit Application

My exhibit uses: (check all that apply) *

Remote Control (enter frequency band below)

Robots

Drones

Amateur radio or CB

ZigBee on 900 MHz

ZigBee on 2.4 GHz

Telepathy

Bluetooth

WiFi Internet access

My own local WiFi cloud on 2.4 GHz

My own local WiFi cloud on 5 GHz (discouraged)

I would use a private WiFi cloud if you provided one

Something else on 900 MHz

Something else on 2.4 GHz

Something else on 5 GHz (discouraged, please explain below)

Something with an antenna, but I have no idea what

Exhibit Application

Will you be giving away, selling, or sampling food (packaged or unpackaged) at Maker Faire?

Yes

No ☒

Do you have any additional special requests?

Yes

No ☒

Availability

Are you able to exhibit for the entire event? *

Yes ☒

No

Friday 9/25 through Sunday 9/27

Mobile Phone Number *

+81 9065185704

Safety

Does your exhibit contain fire (any size flame), chemicals, or other dangerous materials or tools (propane, welders, etc)?* *

Yes

No ☒

Do you have an interactive exhibit including using tools of any kind, riding (bikes, go carts, swings, etc), climbing, etc? *

Yes ☒

No

Exhibit Application

Describe any safety and/or fire issues. *

The exhibit includes a small mobile robot and an articulated robotic arm that attendees can control under continuous staff supervision.

The robot will operate at low speed inside a clearly marked play area with a low physical boundary. The robotic arm's speed, torque, and operating range will be software-limited. Attendees will control the robot from outside the play area and will not place their hands inside the arm's operating space while it is moving.

The exhibit will include an easily accessible emergency-stop control. Only lightweight plastic egg capsules will be handled, and all decorative parts will be securely attached. Staff will immediately stop the robot if a person or object enters the operating area unexpectedly.

The exhibit does not use flames, heat, chemicals, compressed gas, sharp tools, or hazardous materials.

Pack In, Pack Out & Leave No Trace

At Maker Faire we strive to reduce our waste through Pack In, Pack Out, Leave No Trace Sustainability Principles. Thank you for joining our efforts.

Will your exhibit produce any waste?

Yes

No

Optional Information

Upload additional supporting documents

Choose File

Is there anything else you want to tell us?

We have now completed the working LeKiwi mobile robot and SO-ARM101 robotic arm, and we are currently designing and fabricating the custom dinosaur body, articulated neck covers, dinosaur head, egg capsules, controls, and exhibit decorations.

This project is being created by Kanata the Kid Creator and his dad. Our goal is to combine advanced robotics with an experience that children can immediately understand and enjoy. Visitors will be able to drive the dinosaur, teleoperate its neck using a leader arm, or watch it catch a dinosaur egg autonomously.

We are excited to complete the final customization and bring the DINO EGG Catch Challenge to Maker Faire Bay Area. We look forward to sharing the project with children, families, and fellow makers!

Exhibit Application

Terms and Conditions *

2026 Maker Faire Bay Area Participation Agreement & Release, and Consent

This agreement covers the TERMS AND CONDITIONS OF YOUR PARTICIPATION at Maker Faire Bay Area. Our goal is to create a safe and supportive environment for our makers, our sponsors, and our attendees. Make Community LLC ("Make:") owns and operates Maker Faire Bay Area, along with its associated magazine and websites. The person or organization identified below ("Maker") may participate in Maker Faire Bay Area 2026 ("Maker Faire") under the terms of this Participation Agreement ("Agreement"). In this Agreement, "we" or "us" means Make:, and "you" means the Maker identified below. "Exhibit" means the display, demonstration, presentation, performance, and/or other activities and materials that you provide or present at Maker Faire. "Exhibitor Information" means information submitted in your Call for Makers application that is intended for public use. All information about makers and exhibits is subject to our Privacy Policy ([Privacy Policy](#)) and Terms of Use ([Terms of Use](#)), and Maker Faire Participation ([Participation Terms](#)).

Your submission of your application creates a contract that limits the liability of Make: and its sponsors, suppliers, concessionaires, staff, booth exhibitors, and venue proprietors; and each of their respective officers, directors, employees,

I accept the Terms and Conditions.
